iLinux OS Talk

iLinux File Server as Media Center

DigiDeLorean 02 May 2022 14:43:33

iLinux File Server is ideal as Media Center. The interface is simple and speedy as hell so streaming movies and music is snappy and smooth. Unlike other Media Center apps, iLinux File Server focuses on speed. No bells and whistles, no pretty graphics and animations, just raw power. Yet beautiful. My kinda app...

Hint: You can just put links of media folders into iLinux File Server's default folder, instead of copying the files. ;-)

#2. Manjaro Linux Rules 03 May 2022 07:50:55

Kodi much better than file server **https://kodi.tv/**

Kodi real media center!

#3. Not CCP 03 May 2022 08:11:20

Kodi and file servers are quite different....

Besides Manjaro is just as bad as iLinux.

#4. DigiDeLorean 03 May 2022 14:30:46

@Not CCP

If you don't like iLinux don't bust our balls. Go use whatever linux distro you like and don't hijack threads. We like iLinux.

#5. DigiDeLorean 03 May 2022 14:32:38

@Kelly Smith

> *“ Hint: You can just put links of media folders into iLinux File Server's default folder, instead of copying the files.* ”

Good one!

#6. i386 03 May 2022 16:39:59

@Kelly Smith

> *“ Hint: You can just put links of media folders into iLinux File Server's default folder, instead of copying the files.* ”

Cool! Saves disk space!

#7. Linux Soul 03 May 2022 18:33:58

I always appreciated the simple approach in technology.

Kodi and other media center apps are too heavy for old computers and have lost their way if you ask me.

iLinux File Server runs fine as a media center/streaming server even on a netbook without lag.

And an interface that does only what it needs to: Transfer data fast.

That's success.

That's usability.

#8. Seraf 04 May 2022 06:56:39

With iLinux File Server for streaming and Popcorn for media center I don't need anything else...

Download Popcorn Time (.deb) from

https://github.com/popcorn-official/popcorn-desktop/releases

or

https://github.com/popcorn-time-ru/popcorn-ru

Install it.

Open it and go to Settings (Cog icon on top right of Popcorn Time window) > API Server(s)

In all three fields (Movies API Server - Series API Server - Anime API Server) enter:

http://popcorn-ru.tk/

Restart Popcorn Time and your are good to go!

#9. DigiDeLorean 06 May 2022 10:29:33

Popcorn Time is very smooth. Thanx **@Seraf**! Too bad it can't be preinstalled in iLinux due to legal limitations.

#10. Not CCP 06 May 2022 10:38:33

iLinux itself is illegal because it breaks the LGPL license used by GTK...

#11. iLinux Support Team 06 May 2022 10:42:53

@Not CCP

If you think we are breaking the Law go to a Lawyer and don't forget to come forward by Name, ID, Address and Signature.

iLinux Support Team added on 06 May 2022 10:44:56

Do not disrupt Threads.

Do not highjack Threads.

This thread is about iLinux File Server.

If you want to say something irrelevant open a new Thread.

#12. ClickNin 06 May 2022 10:50:52

Don't need, email to "license-violation@gnu" with project information and why you think the product is violating GPL and let them check themselves.
https://www.gnu.org/licenses/gpl-violation.en.html

Also it's better to do this on another thread. I just created one not so long ago.

ClickNin added on 06 May 2022 10:51:40

EDIT: The email is "**license-violation@gnu.org**"
